## BEHAVIORAL OBJECTIVES IN THE PSYCHOMOTOR DOMAIN

### 1. IMITATION

- *When learner exposed to action, makes covert imitation of that action*
- *Followed by overt performance & capacity to repeat it*
- *Performance lacks coordination*

### 2. MANIPULATION

- *Developing skill in following directions, performing selected actions, and fixing performance through necessary practice*
- *Learner capable of performing an act according to instruction.*

### 3. PRECISION

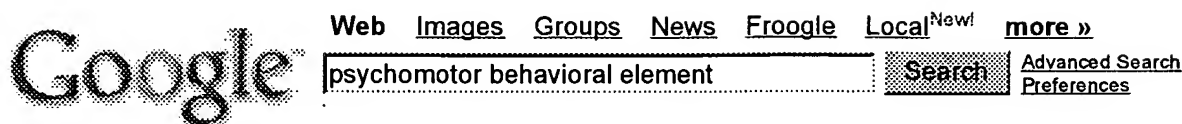

- *Efficiency reaches a higher level of refinement*
- *Learner performs the skill independent of a model or set of directions.*
- *Accuracy, proportion, and exactness become significant (errors reduced to a minimum)*

### 4. ARTICULATION

- *Coordination emphasized*
- *Performance involves accuracy and control plus elements of speed and time.*

### 5. NATURALIZATION

- *High level of proficiency*
- *Performed with least expenditure of psychic energy*
- *Becomes automatic and spontaneous response*
